NEW RELEASE!

STUDCO BUILDING SYSTEMS has now released a decimal system so our customers know exactly what they are getting. Architects and designers can now specify with confidence rather than guessing with hybrid varieties.

**With Studco Studs -
What You See Is What
You Get.**

day delivery.

The HEDAJamb System.

HEDA
TOUGH WALL SYSTEM

The HEDA System being used for all opening in steel stud construction

HEDA JAMB SYSTEM FROM STUDCO BUILDING SYSTEMS

Wall Openings Made Quick & Easy

The HEDA JAMB System from Studco offers a fast, easy and innovative way to create wall openings in load bearing internal and external rough opening applications.

Traditionally wall openings have required two or more studs at each side of Jamb and window openings, along with a series of studs and tracks to make up a header. Whilst this system remains popular, the HEDA JAMB System from Studco uses fewer sections and connections providing the contractor with a simplified and time saving construction process.

HEDA JAMB comes in a range of sizes and gauges from 3-5/8" to 10" in 18ga to 12ga with either 3" or 3-1/2" flange. This gives the engineer versatility in design and the contractor cost saving methods for valued engineering on their projects when they change out traditional jamps and headers for the HEDA JAMB System.

Studco Building Systems has a range of engineered Span Tables for the contractor and the engineer to use in the Studco Building Systems Design and Engineering Manual. Call 800 675 8023 today or email sales@studcosystems.com to request your personal copy to be sent to you. ■
